ASHISH KUMAR YADAV

ashishky0904@gmail.com | +91 6200720427 | Bangalore, India | Portfolio | LinkedIn | GitHub

SUMMARY

Final-year B.E. Computer Science (Data Science) student who builds data pipelines on Azure and Power BI dashboards. Strongest in SQL (CTEs, Window Functions, Star Schema) and Python for data analysis. Interested in Data Analyst and Business Intelligence roles.

TECHNICAL SKILLS

Languages:	Python, SQL, C (Basics)
Libraries:	Pandas, NumPy, Matplotlib, Seaborn
Visualization:	Power BI, Tableau, Microsoft Excel
Databases:	PostgreSQL, MySQL
Cloud:	Azure Data Factory, Azure Data Lake, Azure Synapse Analytics
Tools:	Git, GitHub, Flask, Jupyter Notebook

EXPERIENCE

Web Development Intern | UpToSkill *Nov 2025 – Jan 2026*

Remote

- Built Flask applications with PostgreSQL for structured data storage and retrieval, writing SQL queries for efficient data management
- Collaborated with a remote team using Git, delivering production-ready features within sprint deadlines

PROJECTS

Customer Shopping Behavior Analysis *Feb – Mar 2026*

Python, PostgreSQL, Pandas, Power BI, SQL | GitHub

- Designed a Star Schema data model and wrote 10+ SQL queries using CTEs and Window Functions to analyze 3,900+ transactions
- Built interactive Power BI dashboards to analyze revenue trends, customer segmentation, and subscription behavior
- Found that Young Adults drove $62K in revenue and 73% were non-subscribers, informing targeted marketing strategy

End-to-End Azure Data Pipeline *2025*

Azure Data Factory, Data Lake, Synapse Analytics, Power BI, SQL | GitHub

- Built an end-to-end Azure data pipeline processing 30,000+ records from ingestion to dashboard visualization
- Used Azure Data Factory and Synapse Analytics to perform SQL-based transformations and load data into reporting layers
- Connected Power BI dashboards to Synapse Analytics for interactive reporting and performance metrics

Civic Complaint Analysis System *2025*

Python, Pandas, SQL, Power BI | GitHub

- Analyzed 5,000+ civic complaint records using Python and SQL to find patterns in complaint categories and resolution times
- Used text preprocessing (tokenization, TF-IDF) to extract key themes from unstructured complaint descriptions
- Found that 3 complaint categories drove 60% of unresolved cases, creating Power BI dashboards for municipal teams

AI-Powered Tender Evaluation Portal (CRPF) *May 2026*

Python, FastAPI, React, Gemini API, PDF Parsing | GitHub

- Developed a FastAPI backend to extract and parse unstructured text from PDF tender documents using Gemini API
- Implemented automated decision logic to compare bidder specifications against tender criteria, returning eligibility reports
- Built an interactive React frontend showing decision matrices, compliance metrics, and evaluation summaries

CERTIFICATIONS

- **SQL (Advanced)** — HackerRank
- **Microsoft Power BI** — Microsoft Learn
- **Python for Data Science** — IBM SkillsBuild
- **Data Analytics Job Simulation** — Deloitte (via Forage)

EDUCATION

Sai Vidya Institute of Technology, Bangalore *2023 – 2027*

Bachelor of Engineering (B.E.) in Computer Science — Specialization in Data Science (CGPA: 8/10)
